

Clocking in and out

How to record your hours at work. It takes about
ten seconds.

A short guide for staff · TimeGate

What you need

Two things, both from your manager.

1 A link

It opens the screen you clock in on. It is already open on the tablet at work. Your manager can also send it to you so you can use your own phone.

2 Your own 4-digit code

This is how the system knows the hours are yours. **Keep it to yourself.** If someone else uses your code, their hours go on your name.

WRITE YOURS HERE

My code: _____

If your code ever stops working, or you think someone else knows it, ask your manager for a new one. It takes them a few seconds.

Starting your shift

Tap your code on the keypad. There is nothing else to fill in.

 TimeGate

17:37
Monday 14 September

Enter your code

Your 4-digit code

1	2	3
4	5	6
7	8	9
Clear	0	

The screen you will see. Just your four digits.

It knows who you are and shows you one button.

NOT CLOCKED IN

Alice Reed

Tap below to start your shift

Clock in

Not you? Start again

Tap **Clock in**. That is your shift started.

Clocked in

17:37 · Monday 14 September

YOUR WEEK SO FAR

4h 15m

Finished shifts only, breaks already taken off

Done

Returning to the keypad

The tick means it is recorded. The screen clears itself after a few seconds.

YOUR HOURS, ANY TIME YOU LIKE

Every time you clock in or out it shows your week so far, with breaks already taken off. If you ever want to check your hours, tap your code and look — you do not need to ask anyone.

Taking a break

Tap your code the same way. While you are working it offers two things.

 TimeGate

17:37
Monday 14 September

CLOCKED IN

Alice Reed

Working since 17:37

Start break

Clock out

Not you? Start again

Tap **Start break** when you go, and again when you come back.

When you come back, tap your code and press **End break**.

ON A BREAK

Alice Reed

Break started at 17:37

End break

End break & clock out

Not you? Start again

If your break is the last thing before you go home, use **End break & clock out** — that does both at once.

BREAKS ARE NOT PAID

Break time is taken off your hours. A day from 09:00 to 17:00 with a 15-minute break pays **7 h 45 m**, not 8 hours.

So it is worth ending your break when you actually get back. Every minute you leave it running is a minute off your pay.

Going home

Tap your code and press **Clock out**. That is the whole thing.

If something goes wrong

You forgot to clock out, or forgot to end a break

It happens. Nothing is lost and you are not in trouble.

Tell your manager what time it actually was. They can put it in, and your hours will be right.

Until they do, that whole shift shows as **zero hours** — not a guess, because the system will not invent a time for you. So it is worth mentioning the next day rather than at the end of the month.

The screen says your code is not recognised

 TimeGate

17:38
Monday 14 September

Enter your code

That code isn't recognised.

1

2

3

4

5

6

7

8

9

Clear

0

Usually just a mistyped digit. Try again.

If it still will not take it, your code may have been changed. Ask your manager for a new one.

It says there is no connection

 TimeGate

17:38
Monday 14 September

 No connection — clocking in and out is paused. Tell your manager if this does not clear.

Enter your code

Your 4-digit code

1	2	3
4	5	6
7	8	9
Clear	0	

The keypad stops working until the connection is back.

Nothing is recorded while this shows — so **write down your time on paper** and tell your manager. They will put it in for you.

DO NOT JUST WALK AWAY

If the screen would not take your code, it did not record anything. Telling someone takes a moment. Sorting it out weeks later, from memory, is much harder.

Putting it on your phone

You can use the tablet at work and never do this. But if your manager sends you the link, saving it means it opens in one tap.

1 iPhone

Open the link in Safari. Tap the Share button, then **Add to Home Screen**.

2 Android

Open the link in Chrome. Tap the menu, then **Install app** or **Add to Home screen**.

It then works like any other app on your phone. There is nothing to download and nothing to update.

The whole thing, in four taps

1 Arrive — tap your code, press **Clock in**

2 Break — tap your code, press **Start break**

3 Back — tap your code, press **End break**

4 Leave — tap your code, press **Clock out**

Forgot something, or the screen would not take it? Tell your manager. It can always be put right.
